

Selfs Point Sewer Transformation

March 2026 Construction Update

The Selfs Point Sewer Transformation is now more than 50% complete, marking a major milestone in this once-in-a-generation upgrade for Hobart.

Since our last update, strong progress has continued, with major concrete structures rising at Selfs Point and kilometres of pipeline installed beneath Hobart's highways and streets. Together, these works are strengthening the city's wastewater network and helping protect the Derwent for future generations.

Progress at Selfs Point

Concrete works are complete for the project's largest structure, the new bioreactor and membrane tank, which will significantly improve wastewater treatment performance.

Installation of major pumps has been completed. Once operational, these systems will transfer flows equivalent to around 5.5 million average household toilet flushes each day.

More than 60,000 tonnes of quarry material, approximately 2,400 truckloads, have been delivered to support construction.

Reaching the halfway mark reflects the commitment of the hundreds of people working on this important project.

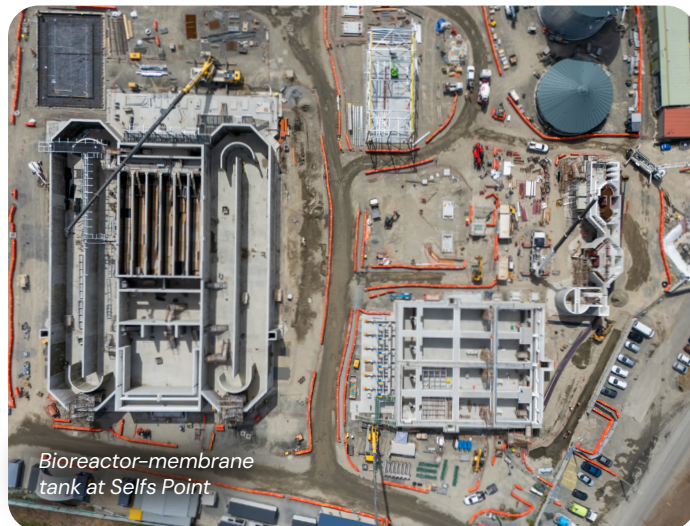

Pipeline Progress

More than 3 kilometres of new sewer pipeline has been installed between Macquarie Point and Selfs Point.

Works continue along the 4.3-kilometre route, including at the Regatta Grounds car park and Queens Walk, where crews are installing the next section connecting to works completed last year through Cornelian Bay Oval.

We understand these are important community links and thank residents and visitors for their patience as we work to minimise disruption.

Investing in Tasmania's Future

Through this project, we are protecting the Derwent, replacing ageing infrastructure, supporting local jobs and building capacity for decades to come. These essential upgrades would not only protect the environment, but they would also deliver meaningful, long-term benefits for Tasmanian communities.

TasWater has proposed investing \$1.7 billion over the next four years through its Fifth Price and Service Plan to strengthen essential water and sewer services statewide.

We thank the community for its continued patience as we deliver this important upgrade.

What's next

In mid-March, works will progress toward the Tasman Highway, including installation across McVilly Drive.

This will require a full closure to all traffic from **Monday 16 March 2026, 7:00am** to **Tuesday 31 March 2026, 5:00pm**. Please refer to the map for closure details.
