Sels Point Sewer Transformation

July 2026 Construction Update

Construction continues to make strong progress on the Sels Point Sewer Transformation, with major milestones recently achieved across all three interconnected components of the project.

This important investment will support Hobart's future growth and a healthier Derwent.

Progress at Sels Point

Work is continuing across the new treatment facility at Sels Point, with crews installing key equipment that will support the treatment process for decades to come.

A recent milestone has been reached on the facility's primary settling tanks, which form one of the first stages of wastewater treatment process by allowing solids to settle before cleaner water moves through the system.

Once operational, the facility will safely treat wastewater from approximately 40,600 homes across Greater Hobart.

Macquarie Point milestone

Construction of the new sewer pump station at Macquarie Point continues to advance, with installation underway of the 25 large concrete wall panels that will form part of the new facility.

Significant underground infrastructure is also being completed beneath the site to help the network better manage wastewater during periods of high demand and wet weather.

Together, the new pump station and Sels Point facility will help remove up to 132 tonnes of nutrients from entering the Derwent each year.

Pipeline Progress

Installation of the new 4.3-kilometre sewer pipeline connecting Macquarie Point and Selfs Point is now approximately 95 per cent complete.

The final section of pipeline will be installed along Selfs Point Road later this year, with the new system expected to begin transferring flows in early 2027.

What's next

Construction will continue across all project sites throughout the second half of 2026, including completion of the remaining pipeline works and ongoing installation of treatment and pumping equipment.

We thank the community for its continued patience and support as we deliver this important infrastructure for Hobart's future growth and a healthier Derwent.
