

Selfs Point Sewer Transformation

November 2025 Construction Update

Welcome to our latest update on the Selfs Point Sewer Transformation. Our crews have been making steady progress across several key areas as we continue building Hobart's future sewer network.

Progress at Selfs Point

At the Selfs Point Treatment Plant, the concrete foundations for two new digester tanks are now complete. Construction of the above-ground structures is underway and will continue over the coming months.

These tanks form an important part of the treatment process – safely breaking down sewage sludge and increasing the plant's capacity to support Hobart's growing population.

Work has started on a new section of the outfall pipeline near the treatment plant. This pipeline is a key part of Hobart's sewer network, safely carrying any overflow treated wastewater offshore during major wet weather events, helping to protect our rivers, beaches, and marine life.

Works through the Domain area

Along Lower Domain Road, crews have completed another major section of the new 4.3 kilometre sewer pipeline that will link Macquarie Point to Selfs Point.

Pipeline installation along Lower Domain Road is now complete, and the road reopened to the public on Wednesday, 22 October 2025.

As this work involves large-scale excavation and trenching, short-term road closures have been required. Thanks to efficient coordination and long hours from our on-ground teams, the Domain Highway reopened six hours ahead of schedule on Sunday 5 October.

To date, more than a third of the pipeline has been successfully installed.

What's next

During November, we plan to start the next stage of installation along Queens Walk, between Bell Street and Bellevue Parade, before continuing through Cornelian Bay Oval, near our laydown site.

The route will begin near the Bell Street car park, follow the northern edge of the oval beside the Brooker Highway, and finish at the top of the oval. In early 2026, we'll begin installing the final section through to the Selfs Point Treatment Plant.

Once finished, this new pipeline will transfer the equivalent of nearly five Olympic-sized swimming pools of wastewater every day, strengthening Hobart's wastewater network for decades to come.

We understand these works can cause some short-term disruption, and we thank the community for their ongoing patience and understanding as we deliver this important upgrade for Tasmania's future.

Since creation, the Palawa have lived in Lutruwita – Tasmania. More than 2,000 generations of Aboriginal families have cared for this Country, looking after its lands, seas, skies and waterways. In the spirit of respect and gratitude, TasWater acknowledges the Tasmanian Aboriginal community as the traditional and ongoing custodians. We pay our respects to them, their culture and to elders past and present. TasWater commits to working collaboratively and respectfully with the Tasmanian Aboriginal community to protect and sustain the precious resources on this ancient land for future generations.
